

Custom Program Description

Rockville Centre Electric has newly implemented a custom incentives program for newly installed TRM equipment for commercial accounts.

Custom incentives are available to customers that purchase and install qualifying energy efficient equipment. Equipment and systems that are more complex and do not fit into the categories covered by prescriptive rebates may qualify for a custom incentive. Our experts can help you review and determine if your equipment qualifies. To be considered for pre-approval, please submit scope of work, proposals/cost, data specification sheet/s.

Eligibility and Program Progress

Customers must be a Rockville Centre Electric Commercial account owner. All customer applications are subject to approval by RVC Peak Savers.

Equipment and systems that are more complex and not covered by prescriptive rebates can qualify for a custom incentive. Our analysts will review your project and determine what incentive you could be eligible for. Pre-approval is required before purchase and installation of equipment.

For pre-approval, submit the completed and signed Rockville Centre Peak Savers Custom Program application, documentation for each equipment type includes scope of work, proposal or installed cost estimate and company W-9 form.

Submit application and information to info@rvcpeaksavers.com or mail the documents to:

RVC Peak Savers
1377 Motor Parkway, Suite 401
Islandia, NY 11749

An email will be sent to address on application notifying incentive and approved equipment. A completion document will shortly follow. For final approval, submit itemized invoices for installed equipment, equipment serial numbers and signed completion document.

Incentive availability is subject to program funding and available on a first come, first served basis. Rebates up to \$500 per Net kW saved.

All projects may be subject to pre and/or post inspection.
